U.S. Citizen | Interim Secret
CompTIA Security+

COMPUTER SOFTWARE ENGINEER | SYSTEMS ENGINEER

Defense technology entrepreneur and Senior Systems Engineer with 9+ years of experience architecting secure, AI-integrated enterprise systems and zero-infrastructure communication protocols for denied environments. Founder of One Island LLC, engineering off-grid mesh communications recognized by DARPA and actively deployed across 23+ countries globally. Palantir American Tech Fellow with deep expertise in Zero Trust Architecture (ZTA), PKI/hardware authentication (YubiKey), full-stack mobile/systems engineering (Swift/Python), and DoD security compliance (ITAR/CMMC). Demonstrated track record of leading greenfield defense platforms, automating enterprise governance, and discovering high-impact mobile OS security vulnerabilities.

Core Competencies:

Cybersecurity Engineering | Zero Trust Architecture (ZTA) | Cryptographic Systems & Post-Quantum Algorithms | Offensive & Defensive Cyber Operations | Distributed Mesh Networks & RF Systems | Kernel & Operating Internals | DevSecOps (GitLab CI/CD, Infrastructure-as-Code) | Reverse Engineering & Vulnerability Research | Process Documentation | Knowledge Base Development | Cross-Functional Collaboration | Security & Compliance Awareness (SOC2 / HIPAA Familiarity) | System Integration | API Awareness | Problem Solving | Time Management | Defense Environment

PROFESSIONAL EXPERIENCE

Lockheed Martin; Huntsville, AL

Senior Systems Engineer

June 2026 - Present

- AI Device Configuration Platform:** Architected and engineered a greenfield AI-integrated device configuration management platform on GitLab from the ground up, enabling automated multi-device deployments and intelligent configuration optimization.
- Zero Trust & PKI Security:** Designed and deployed enterprise-grade full-stack security solutions, including a custom certificate management portal integrating YubiKey hardware authentication, PKI services, and Zero Trust Architecture (ZTA) principles.
- Automated Compliance & ERB Workflows:** Engineered automated governance pipelines linking GitLab, Jira, and AI-assisted decision support for Engineering Review Board (ERB) reviews, drastically reducing administrative review cycles while maintaining strict regulatory traceability.
- Enterprise Configuration Management:** Authored foundational Configuration Management Plans and technical baselines for DoD customer oversight; coordinated multi-discipline alignment across 15+ senior engineering stakeholders.
- DevSecOps & Pipeline Integrity:** Implemented production CI/CD pipelines, automated testing harnesses, and Python automation utilities to harden system deployment pipelines against configuration drift.

One Island LLC; Huntsville, AL

Founder

March 2024 - Present (Concurrent)

- Phantom Mesh Communication Engine:** Architected and launched an infrastructureless, off-grid encrypted voice communication platform over LoRa/Meshtastic mesh networks; achieved rapid international adoption with active deployment across 23+ countries worldwide.
- Edge AI Speech Synthesis:** Pioneered a low-bandwidth voice transmission architecture utilizing on-device local speech-to-text AI transcription, transmitting condensed text tokens across constrained RF channels and reconstructing voice audio at receiving nodes with sub-second latency.

- **DARPA Spark Tank Presentation:** Selected as an invited presenter at DARPA Spark Tank (Denver, CO - July 2025); pitched proprietary T3E97 encrypted mesh systems directly to DARPA program managers, SOCOM fellows, and defense research leadership.
- **Post-Quantum Cryptography & IP:** Engineered the McNeal Protocol (per-message forward-secret encryption) and 'Hollow' (steganographic intelligence embedding within local AI model weights); developed IP strategy and drafted multiple pending defense patent applications.

Palantir; Washington, DC

Aug 2025 - Dec 2025 (Concurrent)

Fellow

- **Cyber Defense & Data Integration:** Selected for competitive national fellowship; architected operational cyber defense and monitoring prototypes utilizing integrated data feeds to deliver real-time situational awareness and threat visibility.
- **Information Governance & Auditing:** Implemented data governance, access controls, and operational audit workflows within Palantir enterprise platforms, ensuring secure handling of high-sensitivity defense data streams.
- **Architecture Specifications:** Authored end-to-end technical procedures, system architecture diagrams, and user operational guides, translating complex data models into actionable compliance artifacts.

HUNTINGTON INGALLS SHIPBUILDING; Pascagoula, MS

May 2023 – June 2026

System Engineer

- **Enterprise Software Delivery (Saved \$2M+):** Contributed 550+ development hours to Orion, a mission-critical enterprise systems platform; integrated backend APIs, automated data validation pipelines, and CI/CD code deployments, delivering over \$2 Million in cost avoidance.
- **Native Mobile Shipyard Logistics:** Engineered and deployed native iOS enterprise applications utilizing Swift and SwiftUI to optimize shipyard industrial production, workforce timekeeping, and real-time operational data collection.
- **DoD System Hardening:** Hardened and monitored 30+ enterprise Linux and Windows systems aligned to DoD security technical implementation guides (STIGs), conducting log audits and automated vulnerability identification via Python and PowerShell.

UNIVERSITY OF SOUTH ALABAMA (HEALTH SYSTEM); Mobile, AL

September 2020 - December 2025

IT Specialist / IT Security Analyst

- **Identity & Access Architecture:** Administered enterprise Active Directory, group policies, and identity access management (IAM) for 3,000+ users across high-availability clinical hospital infrastructure.
- **Vulnerability Assessment & Incident Response:** Executed endpoint monitoring, vulnerability scans, security event investigations, and disaster recovery procedures ensuring strict HIPAA compliance and zero unplanned clinical downtime.
- **Automation & Server Migrations:** Built custom Python data-entry automation tools and an internal secure chatbot; spearheaded the migration of six high-availability production/test servers with zero data loss.

SECURITY RESEARCH, HONORS & CERTIFICATIONS

- **Independent Vulnerability Research (Apple iOS):** Discovered and responsibly disclosed an unpatched state-machine race condition and audio session desynchronization vulnerability in Apple iOS CallKit / InCallService (pending formal review with Apple Security Bounty).
- **DARPA Spark Tank Presenter:** Invited speaker on infrastructureless secure communications and GPS-denied tactical edge navigation (Denver, CO - July 2025).
- **Palantir American Tech Fellowship:** Cohort 2 Fellow (2025); Certified Palantir Use Case Engineer.
- **CompTIA Security+:** Certified active DoD 8570 / 8140 baseline cybersecurity certification.
