

ANTONIO LAMBERT

251.554.3918 • Antoniolamberttech@gmail.com

U.S. Citizen | Eligible to obtain DoD Secret Clearance

CompTIA Security+ (In Progress – able to obtain within 30 days of hire)

COMPUTER SOFTWARE ENGINEER | SYSTEMS ENGINEER

Technical Support Engineer with 9+ years of experience supporting enterprise systems, troubleshooting technical issues, and assisting both technical and non-technical users in fast-paced environments. Skilled in delivering clear, timely communication while resolving issues related to system usage, onboarding, and platform functionality. Experienced in managing high-volume support requests across multiple channels, documenting issues, and collaborating with engineering and security teams to drive resolution. Strong background in system integration, compliance-aware environments, and improving user experience through documentation and process improvements.

Core Competencies:

Cybersecurity Engineering | Customer Support & Success | Technical Troubleshooting | SaaS Platform Support | System Navigation & Onboarding | Ticketing Systems | Slack & Email Support | High-Volume Request Management | Process Documentation | Knowledge Base Development | Cross-Functional Collaboration | Security & Compliance Awareness (SOC2 / HIPAA Familiarity) | System Integration | API Awareness | Problem Solving | Time Management

Defense Environment Experience

- Experience supporting enterprise systems within a DoD-aligned environment at Huntington Ingalls Shipbuilding.
- Experience supporting both technical and non-technical users in fast-paced environments
- Strong written communication skills with ability to explain complex systems clearly
- Experience managing multiple requests simultaneously across different communication channels
- Experience documenting issues and contributing to knowledge base development
- Strong organizational skills with focus on accountability and follow-through

PROFESSIONAL EXPERIENCE

Palantir; Washington, DC

Aug 2025 – Dec 2025

Fellow

- Selected for a competitive national fellowship focused on data integration, security, and operational system development using Palantir platforms.
- Developed a cyber defense and monitoring system leveraging integrated data sources to support secure operations and real-time situational awareness.
- Applied principles of information security, data governance, and system monitoring to identify risks and ensure system integrity.
- Collaborated with cross-functional teams to design workflows supporting secure data handling, access control, and operational oversight.
- Developed technical documentation including system procedures, workflows, and architecture diagrams to support usability and compliance.
- Supported evaluation of system performance and reliability, identifying opportunities for process improvement and risk mitigation.
- Translated complex technical systems into clear documentation and workflows to support user understanding and operational compliance.
- Gained exposure to enterprise-scale security, monitoring, and compliance practices within data-driven environments.

HUNTINGTON INGALLS SHIPBUILDING; Pascagoula, MS

May 2023 – Present

System Engineer

- Supported cybersecurity and compliance activities across 30+ enterprise systems within a defense-aligned environment.
- Assisted in implementing and validating security controls aligned with enterprise and DoD-style requirements.
- Performed system monitoring, log analysis, and vulnerability identification to support secure system operations.
- Collaborated with engineering and security teams to maintain secure Linux and Windows system configurations.
- Supported system hardening and configuration management efforts to improve security posture.
- Developed and maintained security documentation, including procedures, system configurations, and compliance artifacts.
- Supported audit readiness and compliance efforts through traceability of system changes and configurations.
- Utilized automation (Python/PowerShell) to improve security validation and system monitoring processes.

UNIVERSITY OF SOUTH ALABAMA (HEALTH SYSTEM); Mobile, AL

September 2022 – December 2025

IT Specialist / IT Security Analyst

- Provided technical support for enterprise systems serving 3,000+ users, resolving issues related to access, system functionality, and security.
- Assisted users with onboarding, troubleshooting, and system usage across multiple platforms.
- Supported security compliance efforts and maintained system integrity in regulated environments.
- Collaborated with teams to resolve issues efficiently and improve overall user experience.
- Conducted vulnerability analysis, threat detection, and incident response within enterprise healthcare infrastructure.
- Supported security compliance efforts (HIPAA, internal policies) and assisted with audit preparation.
- Assisted with implementation of security controls, access management, and system hardening.
- Performed system monitoring, log analysis, and security event investigation.
- Supported Windows-based systems, Active Directory, and identity/access management processes.
- Developed security documentation and procedures supporting compliance and operational security.
- Collaborated with cross-functional teams to improve security posture and risk mitigation strategies.

UNIVERSITY OF SOUTH ALABAMA (HEALTH SYSTEM); Mobile, AL

August 2020 – September 2022

Help Desk Lead

- Led support operations for enterprise IT systems, serving as a primary point of contact for technical issues across multiple departments.
- Managed high-volume support requests via ticketing systems, email, and real-time communication channels.
- Provided guidance and support to team members, ensuring timely resolution of user issues and maintaining service quality.
- Assisted users with system navigation, onboarding, and troubleshooting across enterprise applications.
- Escalated complex technical issues to engineering teams with detailed documentation and context.
- Developed and maintained knowledge base documentation to improve response efficiency and user self-service.
- Ensured no requests fell through the cracks by maintaining strong organization and follow-through on all support interactions.

System Engineer Intern

- Gained hands-on experience in system administration and IT operations while supporting the organizations critical infrastructure. Focused on maintaining system performance, safeguarding data, and ensuring efficient access controls in compliance with healthcare regulations.
- Administered and maintain active directory, managing user accounts and access permissions to ensure secure and efficient operations.
- Administered Active Directory accounts and system monitoring tools (KACE, Workspace One, JIRA).
- Performed data backups and resource optimization to ensure healthcare system stability.

AREY JONES ; Mobile, AL

Seasonal August 2020– October 2020

Computer Configuration Tech

- Managed computer deployments, software installations, and help desk tickets to ensure operational readiness. Resolved technical issues both remotely and on-site, working with healthcare staff to minimize disruptions and support system functionality.
- Conducted thorough testing of software and operation systems to ensure functionality, reliability, and compatibility with existing infrastructure.
- Deployed PCs across schools, performed software installs, and supported server troubleshooting.

Technical Projects & Systems Development

- Led integration of production and test environments supporting enterprise system deployments.
- Developed automation workflows improving system reliability and sustainment.
- Implemented API integrations enabling communication across enterprise platforms.
- Built internal applications supporting operational workflows and system data processing.
- Adhered to SOX (Sarbanes-Oxley Act) guidelines, ensuring compliance in data handling and financial reporting.
- Hades (iOS App) – Designed and launched a social marketplace mobile app for startup clothing brands, currently live in the App Store. Built with Swift/SwiftUI, featuring custom UI/UX design and integrated payment and social functions.
- Shadow (Secure Messaging App) – Developed an end-to-end encrypted messaging platform that stores conversations as audio vaults using proprietary T3E encryption. Designed responsive UI in SwiftUI, integrated Firebase for cloud sync, and implemented secure key storage.
- Internal Apps at Ingalls Shipbuilding – Built and deployed enterprise iOS applications to support shipyard logistics and production. Created user interfaces in SwiftUI, integrated APIs, and collaborated with engineers to streamline data capture, timekeeping, and operational reporting.
- Orion Software (Internal Enterprise System) – Contributed 550+ hours to development and deployment, including API integrations, data automation, and CI/CD code deployment.
- Designed and implemented UI/UX interfaces for internal mobile apps, applying human-centered design principles to improve accessibility and operational efficiency.
- Built a HIPAA-compliant secure chatbot and automated document data entry with Python, reducing workload and improving compliance.
- Led migration of six production/test servers with minimal downtime; documented APIs and SSH keys for secure operations.
- Version Control & Automation: Git-based workflows, branching strategies, release tagging, automation scripting (Python, PowerShell), CI/CD support in enterprise environments.

PROFESSIONAL DEVELOPMENT & PRESENTATIONS

DARPA Spark Tank – Invited Presenter (*Denver, CO – July 2025*)

- Pitched my proprietary technologies T3E Encryption, Halo Dome, and SWAC Navigation to DARPA program managers, SOCOM fellows, and defense industry leaders. Engaged in discussions on secure communications,

execution control, and GPS-free navigation. Received direct feedback and explored commercialization pathways through SBIR and defense contracting opportunities.

Certifications

- Palantir American Tech Fellowship – Cohort 2 (2025)
 - Selected for competitive national fellowship focused on data integration, system design, and operational use cases
- Palantir Use Case Engineer Certification (2025)
- CompTIA Security+ (In Progress – Able to obtain within 30 days of hire; meets DoD 8570 IAT Level II requirement)
