

ANTONIO LAMBERT

251.554.3918 • Antoniolamberttech@gmail.com

U.S. Citizen | Interim Secret

CompTIA Security+

COMPUTER SOFTWARE ENGINEER | SYSTEMS ENGINEER

Defense technology entrepreneur and Senior Systems Engineer with 9+ years of experience architecting secure, AI-integrated enterprise systems and infrastructureless communication protocols. Founder of One Island Tech, developing post-quantum encryption and serverless mesh networks for denied environments, with technologies recognized by DARPA. Expert in AI/ML integration, full-stack development, mobile engineering (Swift/iOS), and cybersecurity in DoD and regulated environments. Experienced in GitLab CI/CD, configuration management, Python automation, and building production-grade systems from the ground up. Palantir Fellow with pending patents in secure communications and operational security.

Core Competencies:

Cybersecurity Engineering | Customer Support & Success | Technical Troubleshooting | SaaS Platform Support | System Navigation & Onboarding | Ticketing Systems | Slack & Email Support | High-Volume Request Management | Process Documentation | Knowledge Base Development | Cross-Functional Collaboration | Security & Compliance Awareness (SOC2 / HIPAA Familiarity) | System Integration | API Awareness | Problem Solving | Time Management | Defense Environment

Experience

- Experience supporting enterprise systems within a DoD-aligned environment at Huntington Ingalls Shipbuilding, Lockheed Martin, And Palantir.
- Experience supporting both technical and non-technical users in fast-paced environments
- Strong written communication skills with ability to explain complex systems clearly
- Experience managing multiple requests simultaneously across different communication channels
- Experience documenting issues and contributing to knowledge base development
- Strong organizational skills with focus on accountability and follow-through

PROFESSIONAL EXPERIENCE

Lockheed Martin; Huntsville, AL
Senior Systems Engineer

June 2026 - Present

- Architect and develop AI-integrated enterprise systems from the ground up, including an AI-driven GitLab device configuration management platform supporting automated deployment and intelligent configuration optimization
- Design and implement full-stack security solutions including certificate management dashboard with YubiKey hardware authentication, PKI integration, and zero-trust architecture principles
- Develop automated compliance workflows integrating GitLab, Jira, and AI-assisted decision support for Engineering Review Board (ERB) processes, reducing administrative overhead while maintaining regulatory controls
- Create foundational Configuration Management Plans and technical documentation for government oversight and leadership review, coordinating stakeholder reviews across 15+ cross-functional team members
- Lead greenfield technical initiatives independently with full ownership of architectural decisions, technology selections, and implementation approaches

- Integrate AI/ML services for configuration recommendations, anomaly detection, and automated validation to improve deployment accuracy and operational efficiency
- Build multi-system integrations across GitLab, Jira, email services, and AI platforms to enable automated workflow coordination and audit trail reporting
- Collaborate with cybersecurity, operations, and program management teams to ensure solutions meet DoD security requirements and compliance frameworks
- Apply modern DevOps practices including CI/CD pipeline development, infrastructure-as-code, and version-controlled configuration management
- Utilize Python and automation scripting to develop production-grade tools that improve operational efficiency and security posture

One Island LLC; Huntsville, AL

March 2024 - Present

Founder & Chief Technology OF

- Founded defense deep tech company developing secure, infrastructureless communication protocols and serverless mesh networks for denied and contested environments
- T3E97: Engineered zero-audio encrypted voice system with sub-second latency operating without towers or infrastructure over LoRa/mesh channels
- Hollow: Developed steganographic intelligence system embedding messages in AI model weights rather than transmitting data - reconstitutes only with trigger credential, enables on-device AI analyst with no network connection
- McNeal Protocol: Designed per-message encryption where compromising one communication reveals nothing about others, with post-quantum oriented architecture
- Presented proprietary technologies to DARPA program managers, SOCOM fellows, and defense industry leaders at DARPA Spark Tank (Denver, July 2025), receiving direct feedback on secure communications and GPS-free navigation applications
- Pursuing commercialization through SBIR/STTR programs and defense contracting pathways for special operations, intelligence community, and tactical edge computing applications
- Developed technical documentation, system specifications, and intellectual property strategy supporting multiple patent applications in post-quantum cryptography and secure communications
- Navigate defense acquisition landscape including ITAR compliance, CMMC requirements, and government contracting regulations while building relationships with DoD agencies and prime contractors

Palantir; Washington, DC

Aug 2025 - Dec 2025

Fellow

- Selected for a competitive national fellowship focused on data integration, security, and operational system development using Palantir platforms.
- Developed a cyber defense and monitoring system leveraging integrated data sources to support secure operations and real-time situational awareness.
- Applied principles of information security, data governance, and system monitoring to identify risks and ensure system integrity.
- Collaborated with cross-functional teams to design workflows supporting secure data handling, access control, and operational oversight.
- Developed technical documentation including system procedures, workflows, and architecture diagrams to support usability and compliance.
- Supported evaluation of system performance and reliability, identifying opportunities for process improvement and risk mitigation.
- Translated complex technical systems into clear documentation and workflows to support user understanding and operational compliance.

- Gained exposure to enterprise-scale security, monitoring, and compliance practices within data-driven environments.

HUNTINGTON INGALLS SHIPBUILDING; Pascagoula, MS
System Engineer

May 2023 – June 2026

- Supported cybersecurity and compliance activities across 30+ enterprise systems within a defense aligned environment.
- Assisted in implementing and validating security controls aligned with enterprise and DoD-style requirements.
- Performed system monitoring, log analysis, and vulnerability identification to support secure system operations.
- Collaborated with engineering and security teams to maintain secure Linux and Windows system configurations.
- Supported system hardening and configuration management efforts to improve security posture.
- Developed and maintained security documentation, including procedures, system configurations, and compliance artifacts.
- Supported audit readiness and compliance efforts through traceability of system changes and configurations.
- Utilized automation (Python/PowerShell) to improve security validation and system monitoring processes.

UNIVERSITY OF SOUTH ALABAMA (HEALTH SYSTEM); Mobile, AL
IT Specialist / IT Security Analyst

September 2022 - December 2025

- Provided technical support for enterprise systems serving 3,000+ users, resolving issues related to access, system functionality, and security.
- Assisted users with onboarding, troubleshooting, and system usage across multiple platforms.
- Supported security compliance efforts and maintained system integrity in regulated environments.
- Collaborated with teams to resolve issues efficiently and improve overall user experience.
- Conducted vulnerability analysis, threat detection, and incident response within enterprise healthcare infrastructure.
- Supported security compliance efforts (HIPAA, internal policies) and assisted with audit preparation.
- Assisted with implementation of security controls, access management, and system hardening.
- Performed system monitoring, log analysis, and security event investigation.
- Supported Windows-based systems, Active Directory, and identity/access management processes.
- Developed security documentation and procedures supporting compliance and operational security.
- Collaborated with cross-functional teams to improve security posture and risk mitigation strategies.

UNIVERSITY OF SOUTH ALABAMA (HEALTH SYSTEM); Mobile, AL
Help Desk Lead

August 2020 - September 2022

- Led enterprise IT support operations serving 3,000+ users across multiple departments, managing high-volume requests via ticketing systems and real-time communication channels
- Provided technical support, system troubleshooting, and user onboarding across enterprise applications
- Administered Active Directory, managed user accounts and access permissions, and maintained system monitoring tools (KACE, Workspace One, JIRA)
- Developed knowledge base documentation to improve response efficiency and user self-service
- Performed data backups, resource optimization, and system administration supporting healthcare infrastructure stability

System Engineer Intern

- Gained hands-on experience in system administration and IT operations while supporting the organizations critical infrastructure. Focused on maintaining system performance, safeguarding data, and ensuring efficient access controls in compliance with healthcare regulations.
- Administered and maintain active directory, managing user accounts and access permissions to ensure secure and efficient operations.
- Administered Active Directory accounts and system monitoring tools (KACE, Workspace One, JIRA).
- Performed data backups and resource optimization to ensure healthcare system stability.

Technical Projects & Systems Development

- Led integration of production and test environments supporting enterprise system deployments.
- Developed automation workflows improving system reliability and sustainment.
- Implemented API integrations enabling communication across enterprise platforms.
- Built internal applications supporting operational workflows and system data processing.
- Adhered to SOX (Sarbanes-Oxley Act) guidelines, ensuring compliance in data handling and financial reporting.
- Phantom - Mesh Comms - Developed first-of-its-kind off-grid encrypted voice messaging app for Meshtastic LoRa networks. Engineered innovative solution using on-device AI to transcribe speech to text for low-bandwidth transmission, then reconstruct voice audio on receiving device. Enables push-to-talk voice communication over mesh networks without cell towers, Wi-Fi, or internet. supporting group channels and emergency broadcasts.
- Internal Apps at Ingalls Shipbuilding - Built and deployed enterprise iOS applications to support shipyard logistics and production. Created user interfaces in SwiftUI, integrated APIs, and collaborated with engineers to streamline data capture, timekeeping, and operational reporting.
- Orion Software (Internal Enterprise System) - Contributed 550+ hours to development and deployment, including API integrations, data automation, and CI/CD code deployment.
- Designed and implemented UI/UX interfaces for internal mobile apps, applying human-centered design principles to improve accessibility and operational efficiency.
- Built a HIPAA-compliant secure chatbot and automated document data entry with Python, reducing workload and improving compliance.
- Led migration of six production/test servers with minimal downtime; documented APIs and SSH keys for secure operations.
- Version Control & Automation: Git-based workflows, branching strategies, release tagging, automation scripting (Python, PowerShell), CI/CD support in enterprise environments.

PROFESSIONAL DEVELOPMENT & PRESENTATIONS

DARPA Spark Tank - Invited Presenter (*Denver, CO - July 2025*)

- Pitched my proprietary technologies T3E97 to DARPA program managers, SOCOM fellows, and defense industry leaders. Engaged in discussions on secure communications, execution control, and GPS-free navigation. Received direct feedback and explored commercialization pathways through SBIR and defense contracting opportunities.

Certifications

- Palantir American Tech Fellowship - Cohort 2 (2025) ○ Selected for competitive national fellowship focused on data integration, system design, and operational use cases
- Palantir Use Case Engineer Certification (2025)
- CompTIA Security+
